“I witnessed the importance of primary care firsthand as we caught our patient's conditions first, or developed deep long-term relationships, and wanted to apply that to my medical school experience and learn more about primary care career paths. LCCME definitely fulfilled my desire to work in an outpatient, primary care setting. “

“Once of the best aspects of the program is being connected with like-minded students who are passionate about primary care, global health, mental health, and social justice issues, aka the "humanities" side of medicine.”

“My LCCME mentor has been fantastic in guiding me through questions relating to primary care, medical school, residency programs, and life in general.”

“LCCME is well run, well-structured, challenging, effective, and a healthy experience. “

“LCCME does not take up that much extra time from school. I have plenty of time to participate in extracurricular activities and have as balanced of a lifestyle as I want.”
